

Growing up **2030** in a digital world

GOVERNING HEALTH FUTURES
THE LANCET & FINANCIAL TIMES COMMISSION

About The Lancet & Financial Times Commission

Commissioners from a wide range of sectors, expertise, and backgrounds are contributing their guidance, intellectual input, and ideas to a report on *Governing health futures 2030: Growing up in a digital world* (GHFutures2030). This report will be published in *The Lancet* in 2021 and explore the convergence of digital health, artificial intelligence (AI), and other frontier technologies with universal health coverage (UHC) to support attainment of the third Sustainable Development Goal (SDG), with a focus particularly on children and young people today, and future generations tomorrow.

GHFutures2030 YOUTH NETWORK

Digital technologies and data are changing the global health landscape, and growing up today—in a digital world—looks a lot different than it did twenty, ten, and even five years ago. More than ever, COVID-19 has made clear that youth have been disproportionately impacted by the acceleration of the digital transformation, and that they are key agents of change in global and local discussions on governing health futures.

In 2021, The Lancet & Financial Times Commission *Governing health futures 2030: Growing up in a digital world* launched the GHFutures2030 Youth Network as a platform to co-create and co-lead future research, advocacy, and dissemination of the report.

The Network will bring together young people under the age of 30 invested in the health and well-being of youth and the future of health governance that is being shaped today. The aims of the Network are to build a movement dedicated to digital health governance inspired by the needs of children and young people, generating dialogues, events, and actions that are co-designed and co-governed for and with youth.

The Youth Team

The Youth Team of the Commission Secretariat was created in 2020 to amplify the Commission's work and directly engage young people in action and dialogue to govern health futures.

The Youth Team aims to:

- Drive a consultative process between Commissioners and young people at the global, regional, and local levels to ensure intergenerational action and ownership of the report recommendations
- Frame future research and dialogue on governing health futures
- Focus on aspects of the Commission's report that are of particular interest to youth.

How to join

We aim for a network as diverse and multidisciplinary as the young people we represent globally, encouraging participation across geographies and sectors. To join, please complete this short [one-minute google form](#).

For any further questions, please contact youth.ghfutures2030@graduateinstitute.ch.

MAIN OBJECTIVES

The GHFutures2030 Youth Network will:

- **Work with youth** across all geographies and disciplines to advocate for greater involvement of young people in the design and implementation of policies and programmes related to health, technology, and data
- **Support advocacy and dissemination** of the Commission's findings, driven by shared values of inclusion, democracy, solidarity, equity, and human rights
- **Hold decision makers accountable** for their commitments to health and the equitable and responsible use of technology and data
- **Collaborate** with other networks engaged in policy change to promote and govern health futures
- **Amplify youth voices** and mentor members of this network to co-create and co-lead future research, advocacy, and dissemination activities related to governing health futures in a digital world.
