Conceptualising digital transformations in health

Digital technologies interact directly and indirectly with the social, political, commercial, and environmental determinants of health

The digital health ecosystem is grounded in its users and their data

Digital and data-led transformations in health pose a set of novel ethical and human rights challenges

World stumbling zombie-like into a digital welfare dystopia, warns UN human rights expert

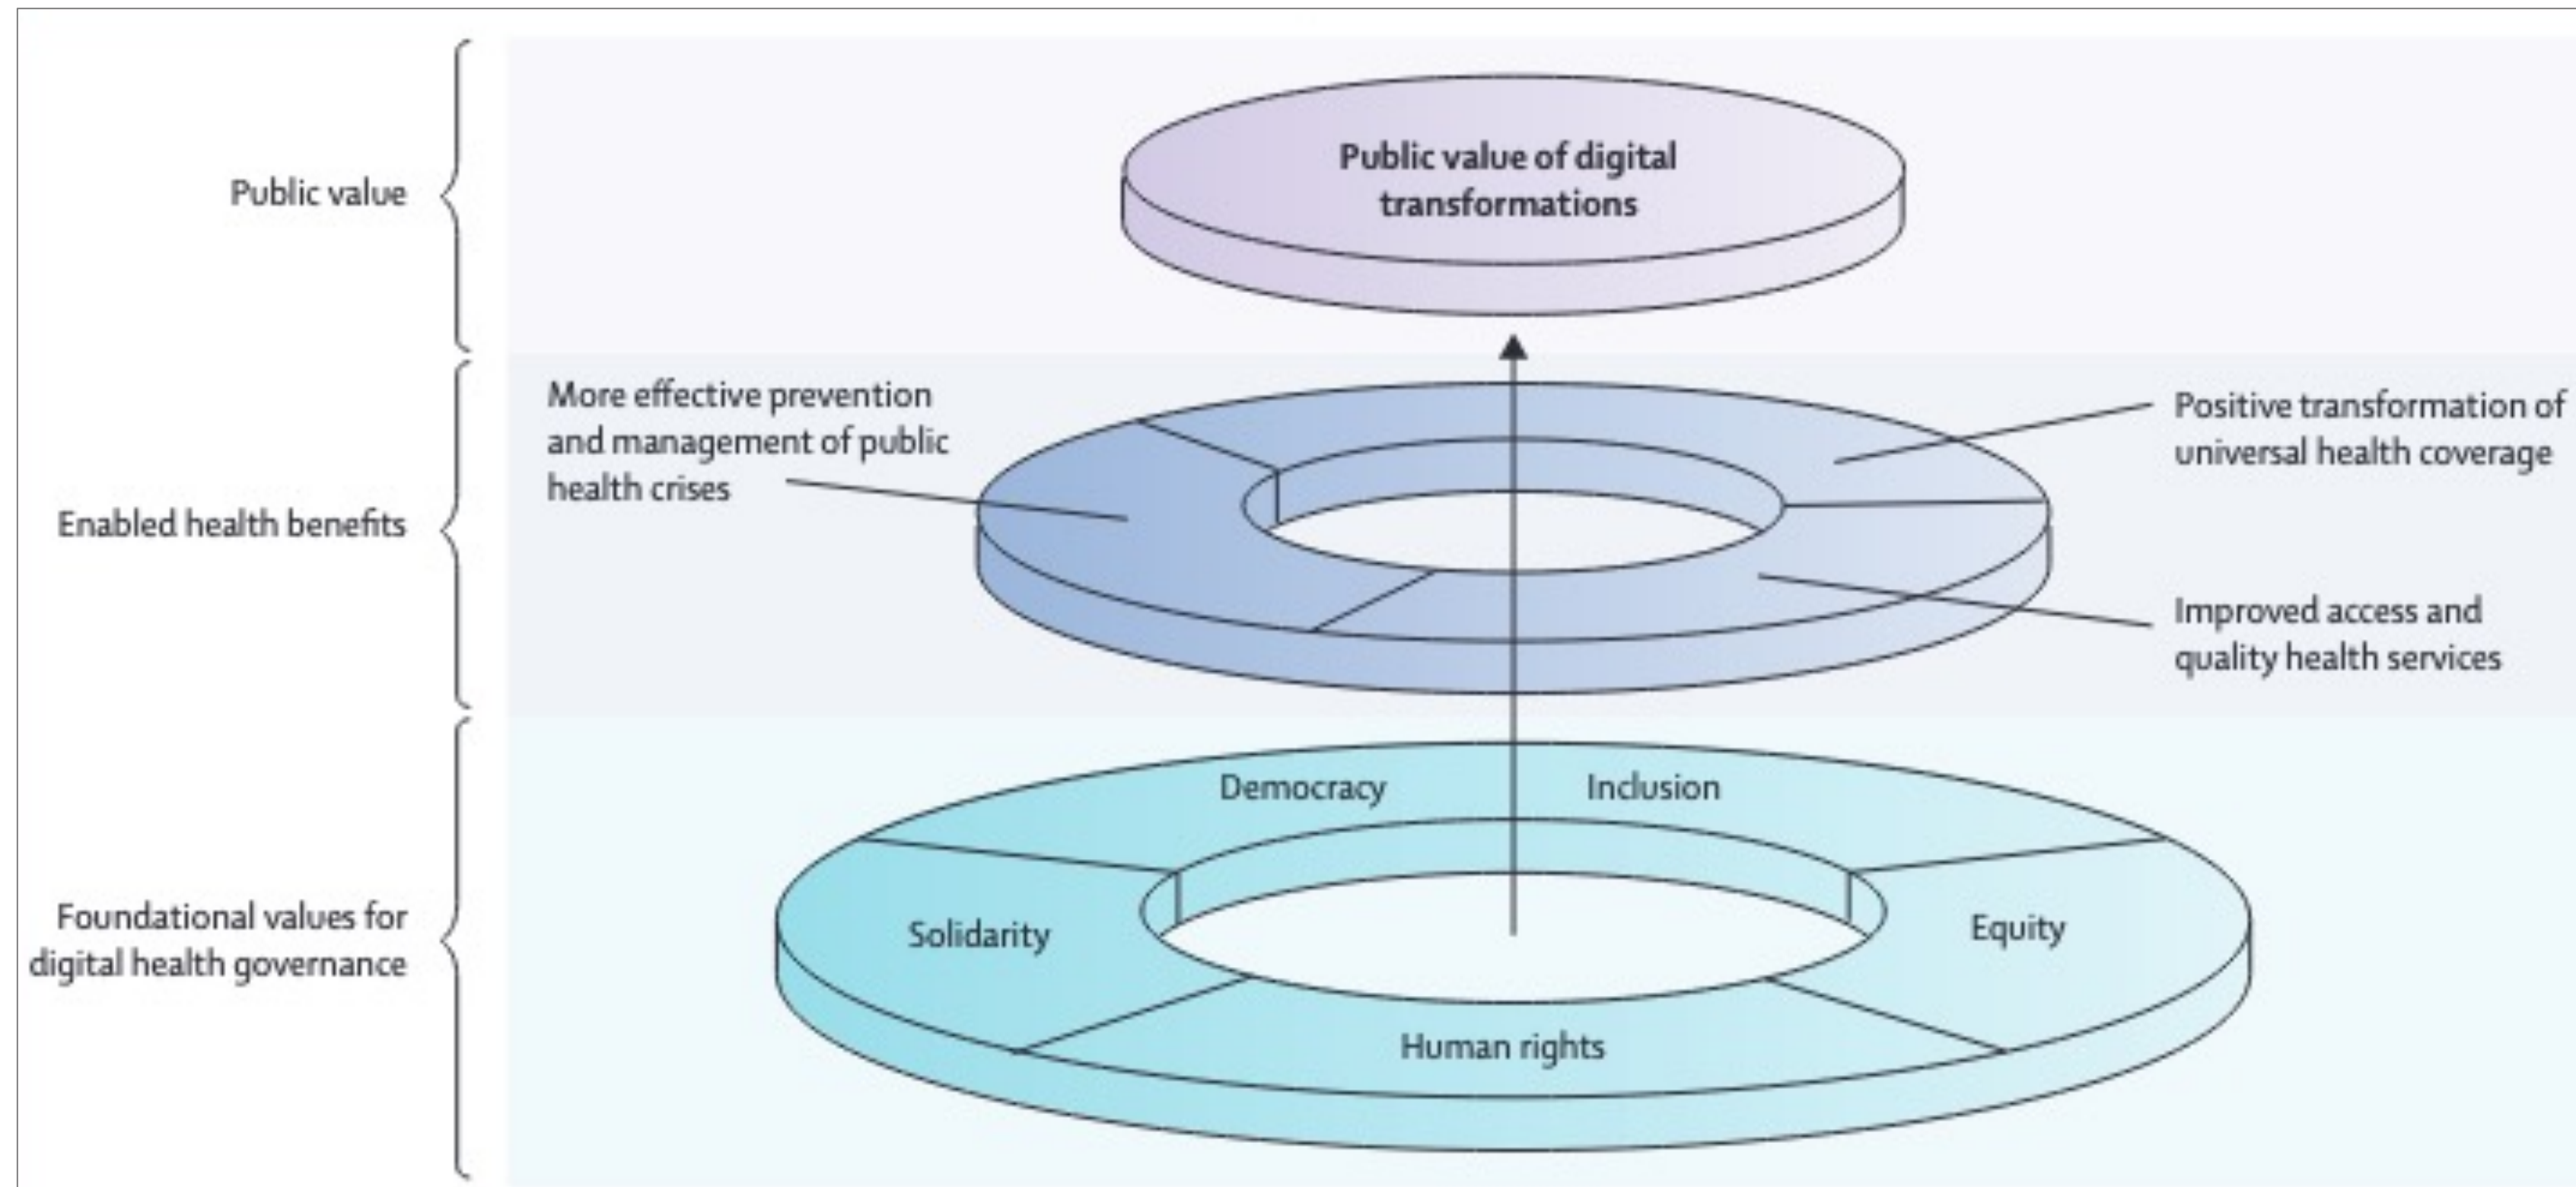

NEW YORK (17 October 2019) – A UN human rights expert has expressed concerns about the emergence of the "digital welfare state", saying that all too often the real motives behind such programs are to slash welfare spending, set up intrusive government surveillance systems and generate profits for private corporate interests.

"As humankind moves, perhaps inexorably, towards the digital welfare future it needs to alter course significantly and rapidly to avoid stumbling zombie-like into a digital welfare dystopia," the Special Rapporteur on extreme poverty and human rights, Philip Alston, says in a *report* to be presented to the General Assembly on Friday.

The digital welfare state is commonly presented as an altruistic and noble enterprise designed to ensure that citizens benefit from new technologies, experience more efficient government, and enjoy higher levels of well-being. But, Alston said, the digitization of welfare systems has very often been used to promote deep reductions in the overall welfare budget, a narrowing of the beneficiary pool, the elimination of some services, the introduction of demanding and intrusive forms of conditionality, the pursuit of behavioural modification goals, the imposition of stronger sanctions regimes, and a

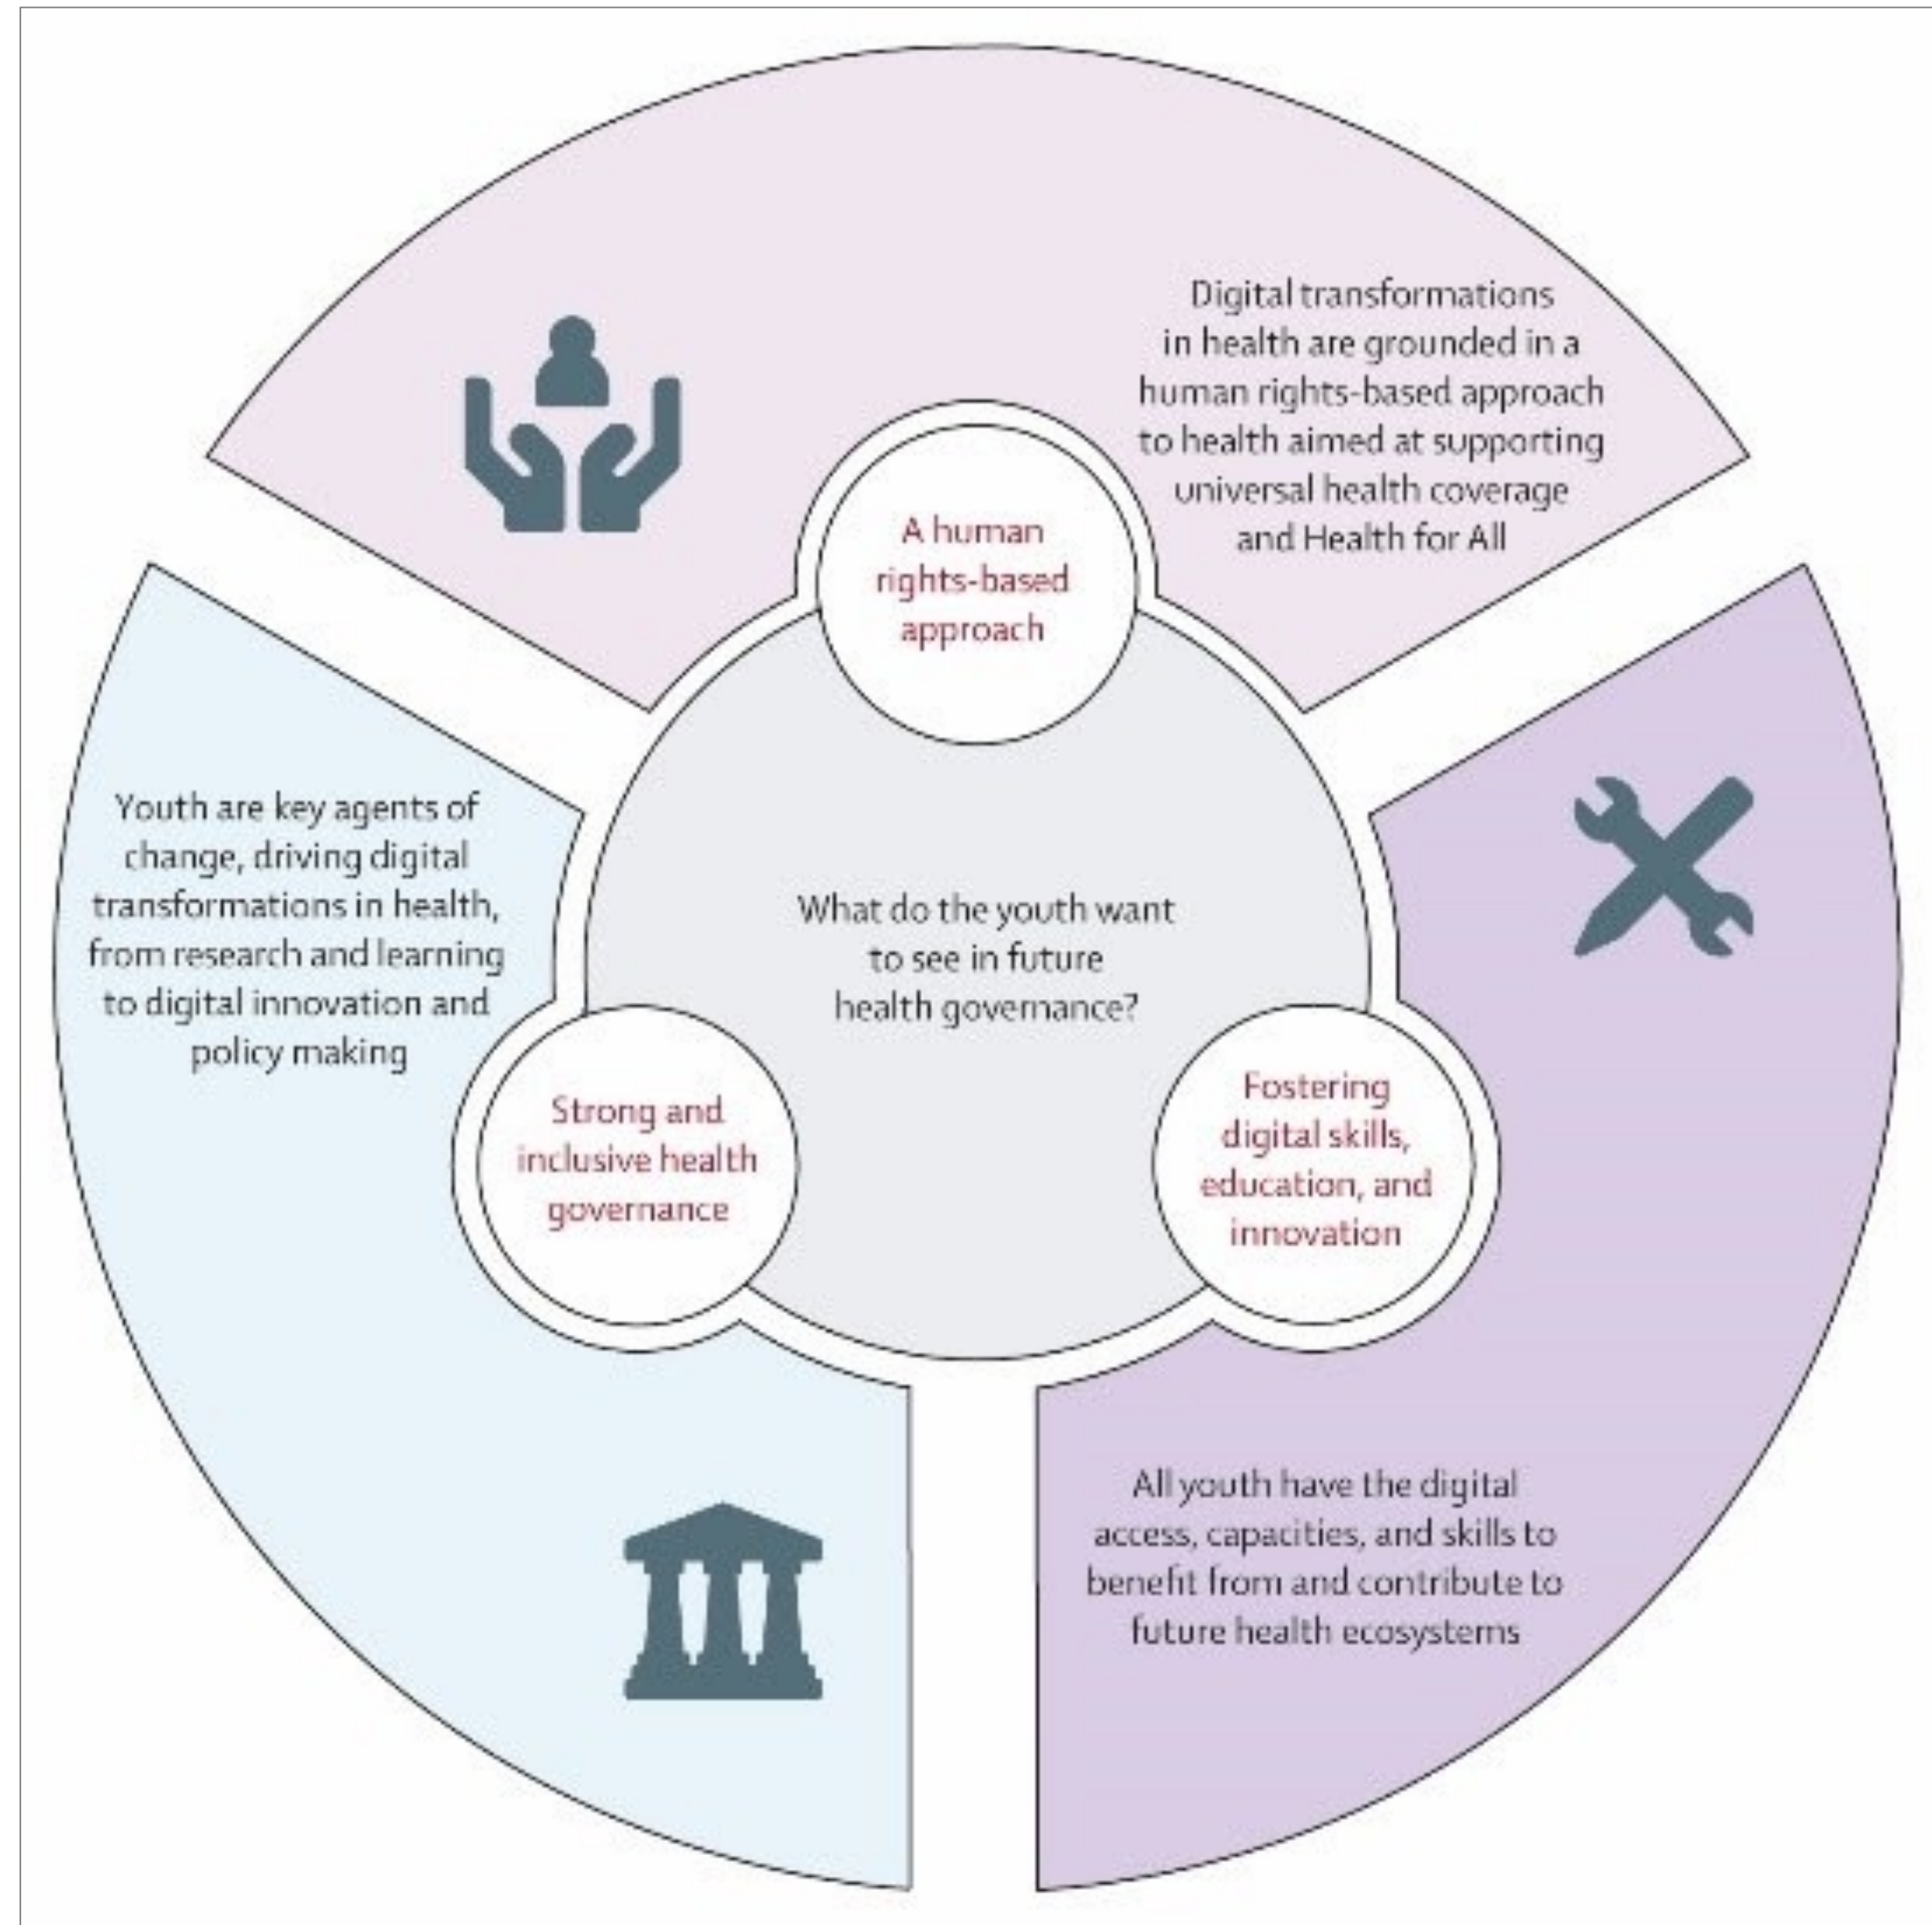

Health for All values as the foundation for digital transformations in health

A solidarity-based approach to health data must emerge as a defining feature of 21st century public health and citizenship

Enfranchised communities and public participation are crucial for citizens to co-design future health governance

Digital, health, and civic literacy are fundamental enablers of digital health citizenship

Putting Health for All values and digital health citizenship at the centre of digital transformation policies and programmes...

...will enable better health and wellbeing for all EU citizens.
